| jomsocial 2.4 - ajax not working on admin side Posted by ashdodia - 2011/12/21 17:39 |
|--|
| There is an issue with jomsocial 2.4 that prevent ajax calls from working on slave sites (i.e. rename group categories, event categories etc.) |
| In order to fix the issue I changed line 15 in file: /administrator/components/com_community/admin.community.php |
| from: define('JPATH_COMPONENT' , dirname(FILE)); to: define('JPATH_COMPONENT' , JPATH_ROOT . "/administrator/components/com_community"); |
| Can it be added to the next patch definition? |
| Thanks, Saar. |

| Please report this issue to JomSocial to ask them fix the bug in their distribution. |
