Logging into Slave admin gives me Master admin

Posted by buddyq - 2012/02/15 03:24

Whenever I go to either: slave.site.com/administrator OR site.com/multisites/slave/administrator and log in, it gives the master admin. The title of the admin screen is the master sites title. What am I doing wrong?

======= SOLVED ==========
I figured out why. It was because I did not have {site_id}.mysite.com in the domains of the slave site. It worked once I added that to the domains.

I noticed that if I already had any files in my deployment directory it would cause this.
