Install patches on Joomla 2.5.4 not working

Posted by infoland - 2012/04/03 07:45

I work with
Joomla 2.5.4
Multisites V1.2.81

I made a new Joomla 2.5 installation on my root server. Then I installed Multisites. When the installation was completed I want to "Check patches installation". When I install the patches I got some errors.

Error during installation of the file "administrator/components/com_config/models/application.php"

One or more backup file is missing. The original file(s) can not be restored.

Joomla Multi Sites version: 1.2.81 (Latest available: 1.2.81)
Patches definition version: 1.2.80 (Latest available: 1.2.80)

It is no problem with the directory permissions, user- or usergroup rights.

I had the same problem.

From the patches screen, try to un-install the patches and then click to install the patches again.

That worked for me.

With the latest joomla 2.5.4, they changed one file that affect the JMS patches.

You need to use the latest JMS 1.2.82 and patch 1.2.81 to work with Joomla 2.5.4

See the FAQ for the procedure to get the latest version.
http://www.jms2win.com/en/faq/faq-joomla-multi-sites#cat-122

_____

Hello.

The same Problem.
We have installed Version 1.2.83 today.
At a new Joomla 2.5.4.

See on Screen.
http://master.s-e-e.net/04-04-2012.png

thx http://www.jms2win.com/images/fbfiles/images/04_04_2012_11_58_01.png

_____

Sorry, I don't see any screenshot

If the error is
Error during installation of the file "administrator/components/com_config/models/application.php"

under joomla 2.5.4

Then this is fixed in the JMS 1.2.82 or higher

So cross-check or this is another error

_____

I have the same problem...

Don´t know if i can attach a pdf file here ...i trie...
http://www.jms2win.com/images/fbfiles/files/error_Check_patches_installation.zip

the pdf file is in the zip file

a short screenshot here:

The message that is reported is that it is not possible to create the file /administrator/define.php

So verify the permission of the /administrator directory.
Perhaps that the owner of the directory does not allows you to write in the directory.

See also the Joomla FTP Layer that can be configured in Joomla "global configuration" that may perhaps help you setup an FTP user to create the file.
This may sometime solve the server permission issue when using an FTP user.

Thx for your answere
but nothing helps.

I trie to set the chmod permissions and also set the ftp-layer not helps.

I will delete the complete domain.
Than I will setup the domain new. Seems that i have a wwwrun problem.
Will set the php as cgi-application .....

This is not a problem, because it´s a new project without any content...
I will confim you about the things happens.

Best regards from Germany

---

i got the same error but wether i click on "install" or "uninstall" patches i get always the same error "Database connection error (2): Could not connect to MySQL."

When i restore the configuration.php file i am able to login to joomla again, but the problems with JMS multisites are not solved.

even i can't connect to joomla anymore. after login this appears on a white screen: "Fatal error: Call to undefined method JSession::checkToken() in /home/farmtest/public_html/administrator/components/com_login/controller.php on line 52"

---

i restored one by one the files that are normally patched by JMS. after this i could login to joomla again and after update to v1.2.92 and installing the patches, problems seem to be solved.

That probably mean that you had modified the DB connection parameter (user / password).
When you install the patches, this restore the files that were backed-up when you install the patches. So if you had changed the password, this may result with such error.
