manage virtuemart store for 2 domain alias ?

Posted by 4hjoomla - 2012/08/14 10:47

Hi,
I'm trying to manage one site with a store and 2 domain alias that reference to the same place.
the first is www.domain1.co.uk and the second is www.domain2.co.uk

www.domain1.co.uk is the main domain and the cart work wel without ant problems.

but when im runing the site under the second domain (www.domain2.co.uk) the cart is not working well and i got this error:

XMLHttpRequest cannot load http://www.domain1.co.uk/index.php. Origin http://www.domain2.co.uk is not allowed by Access-Control-Allow-Origin.

does your component have the abilities to run one virtue-mart store for 2 domain alias ?

I think that JMS may help you.
You could create 2 slave site that share the whole content.

Based on the error message, I suspect that you have a problem is an AJAX that call the wrong domain.
I think that JMS would not be required if you can identify what may be wrong in an Ajax call.
See the following article that seems explain the processing.
http://www.nczonline.net/blog/2010/05/25/cross-domain-ajax-with-cross-origin-resource-sharing/
