Mosets Tree

Posted by falsealarm - 2012/10/16 18:27

When should we expect Mosets Tree to be fully compatible and shareable with MultiSites? It was in 1.5.x but have not been since then.

When an extension is not shown as shared for specific version in the JMS tool / help menu, this simply mean that nobody send us the extension to review for the sharing.

As long as we don't have a request for review and receiving an email with the extension to review, we do not declare the extension for the sharing.

Therefore, if you are interested to have the Mosets tree sharable then send me an email with the extension in the attachement.
See the "contact us" for the email address.
