Joomla 3.0 compatibility

Posted by nico - 2013/04/11 13:57

Is JMS MultiSite compatible with Joomla 3.0?
And if not, when will it be?

If you had watched correctly the home page, for each product, you have the joomla logo with the version number.

Yes JMS 1.3.x is compatible with Joomla 3.0 and we also "partially" with J3.1 beta 3. We mentioned partially be we still not yet re-do all the test.

I did notice the 3.0 icon in some places, but the documentation you've provided for JMS Multisites 1.3 does not mention Joomla 3.0 at all. Sounds like that document could use an update, then.

Thanks for the answer anyway.

We didn't updated the user manual just to change the home page to add the joomla 3.0 number.
The content is identical and is not changed with J3.0

Just the look of Joomla is modified between 2.5 and 3.0 but this is the joomla 3.0 look that is not modified by JMS.

We also did some preliminary testing with J3.1 beta 3 (not yet redo with beta4)
