Will JMS multisite work for this?

Posted by farmerjesus - 2013/10/22 16:46

_____

Here's what I need:

Three websites, in separate subdirectories

example.com/site1
example.com/site2
example.com/site3

- With a template shared between all 3, so if I update the template on one the others will reflect update also.
- A shared images/media section
- The sites will all have similar content but with significant text changes.

I'm hosting on a linux apache server.

Is this possible with JMS multisites? If not, is something close to this possible?

Thanks!

_____

Yes you can do that with JMS.

JMS is able to recognize domain, subdomain and subdirectories.
So you can have website like
domain1.com
domain2.com
subdomain1.domain.com
subdomain2.domain.com
domain.com/site1
domain.com/site2

All is possible.

By default, JMS share all the files and folders between the websites (when the symbolic link is allowed).
So that you have the same /images and /templates directory.

So yes all that is possible with JMS.
