2 ecommerce site with different pricing

Posted by rupomrupom - 2014/03/31 01:46

Hi,
I am trying to check if you have this feature.
If i have www.abcd.com/main1 for 1 site for USA. another one www.ABCD.com/main2 for other country.

I will have the same product but will have different price with different currency.
Is this possible using this extension?
Since it is for different country, so the users will be also different.
I will be using virtuemart for shopping cart.

Thanks

When the price are in different currencies, see the Hikashop extension that also provide multisites functionality when JMS is present.

With Hikashop and JMS, you can create Hikashop categories that are displayed in a specific website. As you can assing a product to multiple categories, it is therefore possible to have product in a specific website.

With Hikashop, you can provide different prices per categories or differents price per User Group.

See JMS Change history with Hikashop
https://www.jms2win.com/en/faq/change-history-13x?start=20

And the Hikashop site at
http://www.hikashop.com/download.html?partner_id=16361
