

60 sites 1 template

Posted by rogerio - 2021/08/05 15:51

Hello,

My organization has about 60 different sites, same layout (header, footer and some banners) but different content.

- Problem: Eventually we have to change common elements (header, footer), so we need to change it in 60 different sites.
- Question: It's possible to use JMS to manage all sites using a single template? What impact will have using JMS? Need to reinstall all sites or JMS can set already slaves installations?

Thanks

Rogerio Duarte
