Mosmodule

Posted by FH45 - 2009/06/09 05:59

Hi,

I have installed Mosmodule v.1.5.1 (latest version) http://extensions.joomla.org/extensions/edition/custom-code/944/details I forgot to install it first at the Master Site and was warn about it when I tried to install Mosmodule at one of our Slave Sites. Than I did the installation at the Master Site which was successful. Went back to the Slave Site to install Mosmodule there too.

I got the following warning:
This extension is not found in the master site.
Please install it first in the master site before installing it into the slave site
Install mambot Error

I tried again to install it the same result. Than I uninstalled Mosmodule at the Master Site and made sure it also was uninstalled in the database. Herafter I installed it again at the Master Site again succesful.

Did the installation at the Slave Site and got the same warning again as above.

What can I do - I really need this plugin to be able to integrate menues and other modules into content such as articles?

Best Regards,
FH45

Can you tell me the version of JMS.
FYI, a fix has been JMS 1.1.19 has solved a similar proble.
See change history http://www.jms2win.com/faq/change-history-v11x

If you need to update JMS, see how to get the latest version in FAQ
http://www.jms2win.com/faq#sec-122
