Please help me for my JCE image resize problem

Posted by dalusoha - 2010/08/18 06:13

I am a user of your Multi Sites 1.1.24.
I have been bothered by a problem for a long time and can not resolve it by myself after many trial and error.

The problem is " my Joomla JCE editor (with image manager) become unable to resize image during uploading in the slave site, which is quite normal in the master site"

After a few trial, i found the problem is related to the image directory.
If i create a separate image directory in the slave site for uploading, the resize function is ok.
If i use a directory that is actually mirror to the master site, the function failed.
But, i want to store the all images of all sites to the same folder, so i prefer to use the virtual directory, which is actual in the master site.

Can you find the method for me to resolve it ?

My master site:
http://www.twlizard.com/edgar
the image directory for uploading is http://www.twlizard.com/edgar/gallery/edgar (no problem for resizing in master site here)

My slave site:
http://www.twlizard.com/edgar/multisites/081
the image directory for uploading is http://www.twlizard.com/edgar/multisites/081/gallery/081 (but the folder "gallery" is actually is the same directory as the master site image directory)
