Pay Pal and Google in Virtuemart

Posted by naturalplusltd - 2009/04/07 20:13

Hi There

I have recently bought your product and successfully installed virtuemart which I want to roll out to each sub site.

I also want to add extensions for Paypal and Google but want to make sure I get ones that are compatible with your offering. Have you used any if so which ones work ok?

Thanks

Steve Mann

I can tell you that PayPal is working with VirtueMart as I use it in jms2win.com that is a slave site. For Google, I don't know but I suppose it will work also.
I can just mention that VirtueMart payment method generally save their configuration on the disk in the VirtueMart directory.
Therefore, the configuration will be common to all the slave sites.

Thanks but which Paypal pro module did you use. There appears to be a few and I want to choose one that is compatable.

Also can you let me know if the following is possible.

I want to have a main site with your plugin and use the slave to have multi smalll shops all using the one shop from the main site. Is this possible?

Thanks

Concerning VirtueMart and payment method, you can choose any of them.
I use the VM method called PayPal.

Concerning the small shop, JMS does NOT share any content.
All the websites are totally independent and will have their own shop.
