Virtuemart on Slave Site

Posted by naturalplusltd - 2009/04/16 00:50

Hi

I have got a slave site working with Joomla but when I attempt to reinstall extension for Viruemart and go to the admin page http://slave1.eshoppingltd.com/administrator/index2.php?option=com_virtuemart I get "You do not have permission to view module"

How do I get round this? Also where are the slave files located if I were to manually attempt to install a module plugin?

Thanks

Jason

Dear Jason,
I have tried to find this error message everywhere in Joomla and VirtueMart and I have not found it.
Would you please tell me which extension for VirtueMart you have tried to install.
Also give me the URL where I can download it to try reproducing what you have described

I am having the same problem in the admin section. I click on the Virtuemart component of the slave site and get the error.

ERROR
You do not have permission to access the requested module.

Are you using the Super Administrator or a normal administrator or a publisher.

Perhaps also that you have your session that is expired between the moment that you have the screen and the moment you have clicked on this extension.

---

i get this error when i not "complete" the virtuemart installation, you should not click on component->virtuemart until the installation bring you there (just follow the links in the installation process).
