copying an existing template

Posted by mancer - 2013/04/23 10:36

Hi edwin

I wish to be careful with my new setup that you helped me with last night.... (thank you). So before i do anything I wish to just double check with you that it is okay....

I wish to experiment with the current sleve site template.... but would like to make a copy of it in case I alter a setting and 'break' it.

Would I do this by:

- going to Components > MultiSites > Templates
- ticking the template I wish to copy
- hitting the NEW LIKE option?

==========

Yes you can use the "New Like" button to make a copy of an existing JMS template rule.
Don't forget to change the name of the template before saving.
