Joomlamigration 1.5 > 3.0, MultiSite/SP Upgrade

Posted by ChristerE - 2013/05/23 13:10

Hi,
History:
I have 1 master-domain mettecosmetique.se(dbprefix: mette_) and 7 slave-sites artdeco.se(dbprefix: artdeco_), nimue.se(dbprefix:nimue_), kalahari.se(dbprefix: kalahari_, gatineau.se(dbprefix: gatineau_), phformula.se(dbprefix: phformula_), depilar.se(dbprefix: depilar_), nimuebioscience.se(dbprefix: biosciense_) in 1 database on a Joomla 1.5 site with JMS MuliSite 1.3.10-basic (recently updated) on officeitpartner.se.
I've exported this database.

I'm planning to move this domains to a new wehotel (oderland.se).

Current Status:
-> On oderland.se, I've created a 'temporary' working domain: http:mettecosmetique.hemsida.eu, I don't want to change the DNS-pointer until the new version is finished
-> On oderland.se, I've imported the J15 database as 'xxx_j15'
-> I've created a new Joomla 3.1.1 with the databaseprefix: mette_
I've installed SP Upgrade and imported all tables from 'xxx_j15' with the prefix: mette_
-> I've installed JMS MuliSite 1.3.10-basic and created a new slave-site 'fresh slave-site' with the prefix: artdeco_
-> I've created a subdomain: http://artdeco.mettecosmetique.hemsida.eu for artdeco and installed a new Joomla 3.1.1 with the JMS MultiSite installation tool and it's all working fine

The Problem:
-> With the master site: http://mettecosmetique.hemsida.eu I use JMS MultiSites -> Tools -> artdeco -> Components -> SP Upgrade (Action: define from master)
-> When I log in to the slave-site: http://artdeco.mettecosmetique.hemsida.eu and go to SP Upgrade -> Core Transfer I get this error message:

An error has occurred.
0 SQL=SELECT a.id, a.extension_name, a.name FROM artdeco_spupgrade_tables AS a WHERE `extension_name` LIKE 'com_users' OR `extension_name` LIKE 'com_content' OR `extension_name` LIKE 'com_contact' OR `extension_name` LIKE 'com_weblinks' OR `extension_name` LIKE 'com_newsfeeds' OR `extension_name` LIKE 'com_banners' OR `extension_name` LIKE 'com_menus' OR `extension_name` LIKE 'com_modules' OR `extension_name` LIKE 'com_media' ORDER BY a.id ASC

Could You please tell me what I'm doing wrong?

==========

Re: Joomlamigration 1.5 > 3.0, MultiSite/SP Upgrade

The message "Define SP Upgrade" mean that only the Joomla extension definition is installed and not the MySQL table required by this extension.

If you want that I add the definition of this exetnsion in the JMS tool menu, please send me the SP Upgrade in the attachement of an email.

Another solution is to re-install the SP Upgrade from the slave site or use the extension manage / discover from the back-end of the slave site.
This should define and install the MySQL tables required by SP Upgrade

Hi and thanks for Your reply.

I've already tried all your suggestions, if I use "discover", the result is the same (same SQL-error), if I try to uninstall OR install from the slave-site I get: Internal Server Error...

I've solved it, in phpMyAdmin I copied/created mette_spupgrade_tables -> artdeco_spupgrade_tables and mette_spupgrade_log -> artdeco_spupgrade_log :) so this is what I have to do with every slave-site. Now You know if the question pops up again. Thanks again!

Send me the extension in the attachement of an email and I will add it definition in the JMS tool - So that you will not have to do the copy of the tables manually.
This will be done by JMS tool.
