update for 2.5 joomla

Posted by GreenRose - 2013/10/19 21:31

Hi,

Joomla 2.5
JMS Version 1.3.17

When I'm updating to the last JMS version 1.3.21 I'm getting error messages:

via Upload Package File:
"JInstaller: :Install: File does not exist
..../public_html/tmp/install_5262dcb827d29/admin/patches/patches_files_j32.zip"

via Install from Directory:
"JInstaller: :Install: Cannot find XML setup file
Path does not have a valid package."

why?

thank you.

I confirm the issue in the JMS 1.3.21 BASIC edition only.
The medium and full edition are OK.
A new JMS 1.3.22 is released to fix the packaging issue.

Thank you for reporting the issue.

I have got this issue too with the latest version:

JInstaller: :Install: File does not exist
/home/xxxx/xxxx/tmp/install_5356825c9f381/admin/patches/patches_files_j33.zip

Then get blank pages in admin

We did a fix in the JMS 1.3.33 basic to add the missing patches_files_j33.zip.
So normally, you just have to re-download it to have the file include.
If you need a new download ID, see our FAQ that show how to get the latest version.
