Creation errors
Posted by buddyq - 2014/02/24 18:40

I am getting extreme errors when trying to create a site: I have many of these same errors but here is one:

Create table error on query . DB Error: You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near '1003e8thstreet_u149_ak_acl LIKE `tangeri_supersized`.`SupersizedMaster_ak_acl`' at line 1 SQL=CREATE TABLE IF NOT EXISTS 1003e8thstreet_u149_ak_acl LIKE `tangeri_supersized`.`SupersizedMaster_ak_acl`

What's going on?

==========

Re: Creation errors

Can you provide the full message to know the table name and therefore the extension that causse this error.
Sometime, there are dependencies between tables and the fact to open and resave the slave site, this fix such kind of errors because the table to which it makes reference is created after this table.

==========

The error is due to the fact that the table prefix start by a number (digit).
So put a letter in front of your table prefix and that should solve your issue.

The SQL error message show syntax error.
The message reported it

You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near '1003e8thstreet_u149_ak_acl LIKE `tangeri_supersized`.`testsite_u62_ak_acl`' at line 1

As you can see the message is "... right syntax to use near '1003e8thstreet_u149_ak_acl

It's not because it starts with numbers. That is completely legal with Mysql. Turns out the issue is two-fold. One is a "bug" if you will with Multisites. The problem turned out to be the fact that the domain name they type in is "1003e8thstreet.com". MySQL sees 1003e8 as a formula! The `e` is a math equation thing that it tries to interpret or perform math on. This would not happen if multisites quoted the site id. I tried adding quoting and the error goes away but then I get an error of "Template not specified".

==========

Re:Creation errors
Posted by buddyq - 2014/03/11 16:04

By the way, most of my clients site start with numbers since most of the sites are addresses.

Trying to add quote in site prefix will not solve the issue.
You have to start with a letter because, as you notice it, JMS does not add back quote in the table name as most of the joomla component.
Solve that would require to make a lot of changes and you are recommended to put a letter in front of the table prefix to fix that event if MySQL provide a solution for that. It is not implemented like that for the moment. So this is a constraint.

I have normally improved that in the JMS 1.3.30 that will be released soon.
