Adverts

Posted by KevKing - 2014/10/17 11:54

Edwin

Have just carried out a fresh install of jms1.3.7multisites on a joomla 3.3.6 setup.
Registered the component but still am getting adverts being displayed? Is there any reason for this?

I have installed several instances of JMS multisites and this is the first time this has happened.

If you have correctly registered JMS, when you go the "about us" menu, the registeration button should not be displayed.

If you have the "registration" button displayed in the back-end of your JMS then, this would mean that the registration might have failed.
In this case, send us by email the product ID that is displayed in the about us menu.
