CRON for advanced search (com_finder)

Posted by skouf - 2016/12/13 10:21

Hello

I need to setup a new crontask :

php /home/mywebsite.fr/www/cli/finder_indexer.php

With this line, i can update automatically the index of the com_finder component.

But how can I make it works on sites created with multisite ? I tried and it didn't index anything. The CLI directory is not created as a symbolic link.

I can't use the basic Joomla search because I can't configure important things for search engines.

Thanks for your help !

Just a little up to know if you have any comments regarding this ?

Thanks !
