|  |

What option do I choose for making a site identical in every way to the master domain?

Thanks, Greg

You can use the JMS Template rules replicMasterXXXX where XXXX is Domain, Subdomain, Subdir, Multisites

replicMasterDomain when the new site is a domain replicMasterSubdomain when this is a subdomain replicMasterSubdir when this is a subdirectory of the master replicMasterMultisites when this is a subdirectory of /multisites

------
