Date Time
Posted by usegoodbait - 2012/10/03 10:05

I am installing 1.3 5 beta in a Joomla 2.57 which is housed on a 5.3 php centos distro

I get

Warning: date() : It is not safe to rely on the system's timezone settings. You are *required* to use the date.timezone setting or the date_default_timezone_set() function. In case you used any of those methods and you are still getting this warning, you most likely misspelled the timezone identifier. We selected 'America/Denver' for 'MST/-7.0/no DST' instead in /home/xxxx/public_html/includes/multisites_browser.php on line 6

Under the Joomla control panel I get:

Unknown Joomla Update Status where the Joomla Updater Icon is
Unknown Extensiosn Update Status is whre the Exensions status is

Can you advise? I tried setting the php.ini with and I tried setting the date in htaccess

Both occur only when apply patches.

I assume the update Joomla extensions and site are part of what is mentioned in the manual.

Can you please clarify if these are issues to be concerned with?

Concerning the warning on the date, this is not critical.
THis is just due to the fact that we didn't initialize the "time zone" for the date rendering. The time zone is initialized by joomla later when it will start.

Concerning the "joomla update status", I suspect that this is due to "open_url" that is not allowed by this extension.

Concerning the date/time, I have added a default UTC timezone to avoid this warning in the future.
This will be available in the next JMS 1.3 (beta6 or RC1 - I don't know yet)
