# Error 1062

Posted by aikigi - 2013/06/11 19:39

---

Hello,

I just create a new configuration base on joomla 3.1, install the lates version of JMS as well as easyblog and easy discuss.

I created a new fresh site  with all extensions include (but don't share their database).

During the joomla installer on both site, joomla told me that the error reporting was ON. (should be off, I don't know why it is on!!)

The problem is, in the new slave site (created into "multisites" directoy), when going to the esayblog page, I get an error 1062:

1062 Duplicate entry '0' for key 'PRIMARY' SQL=INSERT INTO `wscom1_easyblog_users` (`avatar`,`description`,`url`,`params`,`permalink`) VALUES ('default_blogger.png','','','','')

When I go to the easydiscuss page, error as well:

1062 Duplicate entry '0' for key 'PRIMARY' SQL=INSERT INTO `wscom1_discuss_users` (`avatar`,`description`,`url`,`params`,`alias`) VALUES ('default.png','','','','')

On the master site, everything looks ok.

The full message on the pages are:

Any idea what it could be and how to fix it?

Thanks.

==========

The message mentioned that you have a duplicate key.
So you have to verify the content of your DB and perhaps with PHPMyAdmin.

I suppose that you already have such record - otherwise, I don't see why you have the message duplicate key.

Hello,

I don't know much about database :(

I went to phpmyadmin and find the two tables (easyblog ans easydiscuss) but I don't know what to look for. I don't know how it is suppose to be...

Could you please look at it for me?

I will send you the access code to my testing sites by email.

Thanks

Based on the URL that you gave me by email, I didn't found anything and the error message that you mentioned didn't appeared on my PC.

Perhaps that you could try cleanup the cache of your browser and verify if you still have the message. Perhaps this is a message that you got during a previous test that you did.

Yes, I did found out what was the problem. When I created the slave site, the default blog post from Easyblog and dicussion from Easydiscuss where create by an unknown user. I realize then that the super user from the master site was the one mention in the error. I deleted the blog post and discussion related to that user and it fixed the problem.

Now I don't know if it is normal or a small bug, or a configuration error from me. But it looks like that when propagating the easyblog and easydiscuss extension from the master site to the fresch slave site, the default content from those extension are considered as writed by the super user of the master site, not the slave site.

Thank you for looking at it.

Sincerely.

Do you have the Joomla users that are shared ?
and the easyblog that is not shared ?

The symptom let me suppose that you have the joomla users that are shared and that easyblog try creating a new user with exactly the same value than the one that is already shared.
