can not install update v1.3.18

Posted by rossi256 - 2013/10/01 22:29

Hi,

I am on Joomla 2.5.14
tried to install the latest update, but keep getting a list of errors in the extension installer and after that a "installation success".
the errors look like this:
Failed deleting controller.php
Failed deleting index.html
Failed deleting slaves_helper.php
Failed deleting index.html
Failed deleting slaves.php
Failed deleting multisites.php
Failed deleting router.php
Failed deleting delete.css
Failed deleting edit.css
Failed deleting index.html
Failed deleting list.css
Failed deleting delete.php
Failed deleting edit.php
Failed deleting bg.png
Failed deleting index.html
Failed deleting jmslistbg.jpg
Failed deleting row0bg.png
Failed deleting row1bg.png
Failed deleting theadbg.jpg
Failed deleting index.html
Failed deleting list.php
Failed deleting templateDetails.xml
Failed deleting template_thumbnail.png
Failed deleting list.css
Failed deleting delete.php
Failed deleting edit.php

and many more...

I have installed loggie and logged an install and it says:
Warning: chmod() : No such file or directory
/home/xx/public_html/libraries/joomla/filesystem/file.php on line 195
2013-10-01 15:02:50 Warning: unlink(/home/xx/public_html/components/com_multisites/controller.php) : No such file or directory
/home/xx/public_html/libraries/joomla/filesystem/file.php on line 199
2013-10-01 15:02:50 Warning: chmod() : No such file or directory
/home/xx/public_html/libraries/joomla/filesystem/file.php on line 195
2013-10-01 15:02:50 Warning:
unlink(/home/xx/public_html/components/com_multisites/helpers/index.html) : No such file or directory
/home/xx/public_html/libraries/joomla/filesystem/file.php on line 199
2013-10-01 15:02:50 Warning: chmod() : No such file or directory
/home/xx/public_html/libraries/joomla/filesystem/file.php on line 195

2013-10-01 15:02:50 Warning:
unlink(/home/xx/public_html/components/com_multisites/helpers/slaves_helper.php) : No such file or directory
/home/xx/public_html/libraries/joomla/filesystem/file.php on line 199
2013-10-01 15:02:50 Warning: chmod() : No such file or directory
/home/xx/public_html/libraries/joomla/filesystem/file.php on line 195
2013-10-01 15:02:50 Warning:
unlink(/home/xx/public_html/components/com_multisites/models/index.html) : No such file or directory
/home/xx/public_html/libraries/joomla/filesystem/file.php on line 199
2013-10-01 15:02:50 Warning: chmod() : No such file or directory
/home/xx/public_html/libraries/joomla/filesystem/file.php on line 195

.....
.....
....

I already tried setting all files and directories to 777 and i set the owner of the files to apache. I also tried the FTP Layer, all brings up the same issue.

I wouldn't mind it but in Multisites > Maintenance i have
JFolder: :files: Path is not a folder. Path: /home/xx/public_html/installation/sql/mysql
JFolder: :files: Path is not a folder. Path: /home/xx/public_html/installation/sql/mysql
JFolder: :files: Path is not a folder. Path: /home/xx/public_html/installation/sql/mysql
JFolder: :files: Path is not a folder. Path: /home/xx/public_html/installation/sql/mysql

so i am not sure all is going smooth...

In case Edwin or someone can imagine whats up with those files that the system tries to chmod(??), let me know - any idea what i can do?

==========

The "Failed deleting" message is a standard Joomla message that is displayed when it does not has the permission to delete a file.

As Joomla does not display the full path, it is hard to tell you where the permission in your environment are wrong.
If you want to know the full path, you need to modify the standard joomla code to display the full path.
The source where joomla display this message is

/librarires/joomla/filesystem/file.php
line 216

Something that you may try is to enable the Joomla FTP Layer that sometimes helps joomla to create, update and delete files.

The other "chmod" error in the same filesystem/file.php let me suppose that the path of the file is wrong or that you don't have access.

I strongly suggest that you debug the joomla code and add traces on the "file" to get the full path.

If you don't have the skills to debug joomla, we can do that for you with our billable support that you can order at
