

Missing admin user in slave site

Posted by zdenka - 2013/11/05 21:30

Hello,

I have a problem with login into the slave site.

Used template - zdenka2 (see picture zd.kvalitne.cz/share/missing_admin_user/template.png)

created slave site - slave1.mimino.cz (see picture zd.kvalitne.cz/share/missing_admin_user/slavesite.png)

when slave site has been created from master site Joomla administration page this error has been displayed (see picture zd.kvalitne.cz/share/missing_admin_user/error.png)

DB - slave user tables are shared with master but empty (see picture zd.kvalitne.cz/share/missing_admin_user/DB.png)

obviously I cannot login into the slave site Joomla administration page (probably because shared user table is empty) (see picture zd.kvalitne.cz/share/missing_admin_user/login.png)

Any hints?

Joomla 2.5.14

Web Server Apache/2.2.15 (CentOS)

PHP Version 5.3.3

Database Version 5.1.69

Webhosting Webuzo 2.0.6

Multi Sites - 1.3.22 - Medium

Multi Sites User Site - 1.2.02

This means that the user "admin" is not defined in the slave site.

Add in the "Multi Sites User Site" the "admin" user to the slave site "slave1.mimino.cz".

When sharing partially the users, by default the users are not created in the slave site.

You have to grant the permission to access the slave site (including for the admin).

If you had a look with PHPMyAdmin, you should see that there is no user present in the slave 1 website.

Only the users defined with "Multi Site User Site" will be shown in the slave.

Hi Edwin, thanks for advice. This is better solution than mine :-)
I have created user from the slave site and assign him admin rights directly in DB (myphpadmin).

I have noticed the shared user table in DB is empty after slave creation (only table where users exist is prefix_multi_sites_user table). And it was weird to me.

Thanks,
Zdenka

Bonjour,
j'ai une question à ce propos :
Comment faire pour que l'utilisateur du site Master qui crée un site en Front se voit automatiquement inclus dans la liste des utilisateurs du site slave qu'il vient de créer ?
Merci, bonne journée

Pour ce genre de personnalisation, il faut créer un plugin.
L'exécution de plugin lors de la création de site à partir du front-end nécessite d'activer la fonctionnalité "billable website".
Pour certains clients, j'ai créé un plugin qui permet de traiter des champs personnalisés dans le layout du front-end et qui permet aussi d'ajouter un utilisateur admin et modifier l'utilisateur connecté pour changer ses droits dans le site esclave.
Si vous souhaitez ce genre de plugin, c'est possible de le personnaliser durant une session de support payant qui peut être commandé à l'adresse.

Ok, je mets en place mon système et je reviens vers vous.
Bonne journée
