Fatal error: Argument 2 passed to JAdapterInstance

Posted by Aradise - 2015/01/22 09:15

Hello,

I tried to uninstall some plugins in one of the slaves sites and it returns a fatal error.

JMS version 1.3.41 - Joomla 3.3.6

Catchable fatal error: Argument 2 passed to JAdapterInstance::__construct() must be an instance of JDatabaseDriver, none given, called in /home/account/subdomains/mastersite/public_html/administrator/components/com_multisites/libraries/joomla/installer/installer_multisites.php on line 532
and defined in
/home/account/subdomains/mastersite/public_html/libraries/joomla/base/adapterinstance.php on line 46

Can you precise how you uninstall some plugins ?

I have tried uninstalling the plugin with the JMS Tool menu and it succeed.
Can you precise the produce to help us reproducing it.

I'm getting the same bug aswell

Catchable fatal error: Argument 2 passed to JAdapterInstance::__construct() must be an instance of JDatabaseDriver, none given, called in /home/juss/public_html/administrator/components/com_multisites/libraries/joomla/installer/installer_multisites.php on line 523 and defined in /home/juss/public_html/libraries/joomla/base/adapterinstance.php on line 46

I unninstall plugins on the backoffice ->extension manager->manage (select and uninstall plugins), furthermore im trying to uninstall them on slave sites, the main site works fine. I believe it was after an update to joomla 3.3.6.

Is there any fix for it? Or is there any way for me to help you fix it?

I tried to uninstall extensions in the slave sites, from their extensions manager and extension manager crashes with the error I posted on the initial question.

The JDatabaseDrive let suppose there is a DB connection error that is not able to get the instance on the DB.

I will try reproducing that.
