

Jms2WinFactory:: createDBO_ BasedOnConfig: Could no

Posted by jsowler - 2017/10/09 11:12

Hi,

I having issue when creating a cloned slave website. I already set the user to super privileges but still don't work. I think it did not manage to create a user and a database.

See screenshots:
<http://prntscr.com/gv31nb>

Joomla Version: 3.7.4
Php Version: 5.6.31

Do you use the latest JMS 1.3.68 ?
In the version 1.3.67, I did a fix to process specific MySQL error code when CREATE IF EXISTS fails.

See change history
<https://www.jms2win.com/en/faq/change-history-13x>

So if you use an older JMS version, please update it.
See get latest version for the procedure
<https://www.jms2win.com/en/faq/faq-joomla-multi-sites#cat-122>

So verify if you have the correct MySQL user / password to connect on this DB.

Also try to enable the joomla debug mode in the "Global Configuration" to get more info and the DB connection and queries.
