Edwin2WinModelRegistration::_sendUpdateVersion()

Posted by schultz - 2023/03/18 09:40

Hello Edwin and team,

I cannot work in the JMSmultisites Backend administration anymore.
I can:
1) reach the main page of the component with the list of sites
2) open any of the slave site configurations (I did not try to change anything and save this)
3) check the patches

but any other menu item produces the following error:

Non-static method Edwin2WinModelRegistration::_sendUpdateVersion() cannot be called statically

as I cannot reach the "about us" page, I am unable to get a download link for any latest version.
I am running:
PHP 8.0.27
Joomla 3.10.11
JMS Multisites 1.3.85 - basic

any help would be greatly appreciated
kind regards
Ruediger
