Full-size additional images. Posted by KingoftheRoad - 2009/03/19 11:58
Hi Edwin,
Pls have a look at:
http://web06.biza.com.hk/index.php?page=shop.product_details&flypage=ilvm_fly2_blue.tpl&product_id=39&category_id=15&option=com_virtuemart&Itemid=2⟨=en
At first, I thought it is a configuration or compatibility problem of the VirtueMart Template I bought. However, after several testings on my local computer, I found the same error on a local JMS master site with NO VirtueMart template installed.
And on another locate site with only the VirtueMart temple but no JMS, No such problem found.
So, I suspect it is a bug of JMS. As seen on the above link, on-the-right-hand-side should be a thumbnail image of an additional image. But it shows the full size.
Would you check whether the same problem happen on yours?
Many thanks. :huh:
Seth

Can you also give a screenshot of the expected result. I don't know which image is wrong.
After that you will have to explain how you have specfied the image. Is this a specific component or just an insert of an image.
Can you describe the procedure to reproduce that How do you want that in my environment if I have not a clear description on how to reproduce that.
Please give me a detailled description.

Which kind of VM content must be provided? Which kind of setup?
