4 Installation folders

Posted by FH45 - 2009/05/14 00:24

Hello,

After a successful upgarde to the latest version of JMS we checked our installation and found here 4 installations folders;

1. Installation
2. Installation_to_delete
3. Installation_to_delete1 (dated yesterday where we did the upgrade)
4. Installation_to_delete2 (dated yesterday where we did the upgrade)

I just want to know shall we delete folder 2-3 or leave them?

Best regards,
FH45

Yes you can cleanup the 2 to 4 points.
Just keep the point 1 to allow install slave site.

In JMS, when it uninstall the patches, I have prefered rename the installation directory instead of delete it directly as it contains some patches and let the user (you) decide what to do.
