Param of dedicated server

Posted by laubro - 2009/01/21 00:04

Hy
I've a dedicated (linux, plesk 8) server and I want use JMS on one of my websites, but after a lot of (lot of, lot of...)search on internet and in the very no-dinamyc support of my hoster, i can't use it. I've param a lot of tests on my server config (virtualhost on httpd.con, httpd.include, dns zone...) That not work (http.demo.domain.com or http://www.domaine.com/demo)

Do you can help me for "complete" configuration with a good procedure fo param the server for exemple, before I take off my computer by the window !!!
thank's

laurent

Yes laurent, we are also doing such kind of support when required by our customer.
I contact you by email for the conditions and price of such support.
