Updating Community Builder User Profiles on Joomla

Posted by john@phortse.com - 2010/07/08 00:35

I've got the following base configuration:

Joomla 1.5.18

Joomla Multi Sites version: 1.1.13
Patches definition version: 1.1.5

Community Builder 1.2.3

On the master site, I can open a cb user profile from the "backend", make changes and save it. Everything works fine.

On the slave site I cannot. When I make an update to a cb user, click save, nothing happens. Everything else works fine.

Note: CB User profiles can be updated on the Frontend.

Thanks for the help and support.

John

Community Builder 1.2.3 needs a new patches.
Between version 1.2.2 and 1.2.3, they have refactory the CB and have move some peace of code from one source to new sources. So one of the patch can no more be applied and should be applied into another source.

If you are trying to install the JMS multiisites patch definiition
